Quick start

Start here - read the build status before installing.

The source ZIP is not an installer. It contains no Mac DMG, AU or VST3 binary. A successful Mac build must create those files. If you have a generated DMG, use its included package installer.

1. Get the correct installer

If you already have a successful Mac build, open its DMG and run the I.R.Choir package installer. If you have this source bundle only, follow the Mac build instructions in the Release and Test Report or double-click Build-I.R.Choir.command on a Mac with the required tools.

2. Install the native plugins

Quit your DAW. Mount the DMG, read its welcome and audit, and run the .pkg. Restart the DAW and rescan plugins. The target is macOS 12 or later, on Apple Silicon or Intel; Mac validation is still pending for this release.

Format	Installed bundle
AU	/Library/Audio/Plug-Ins/Components/IRChoir.component
VST3	/Library/Audio/Plug-Ins/VST3/IRChoir.vst3

3. Make your first sound

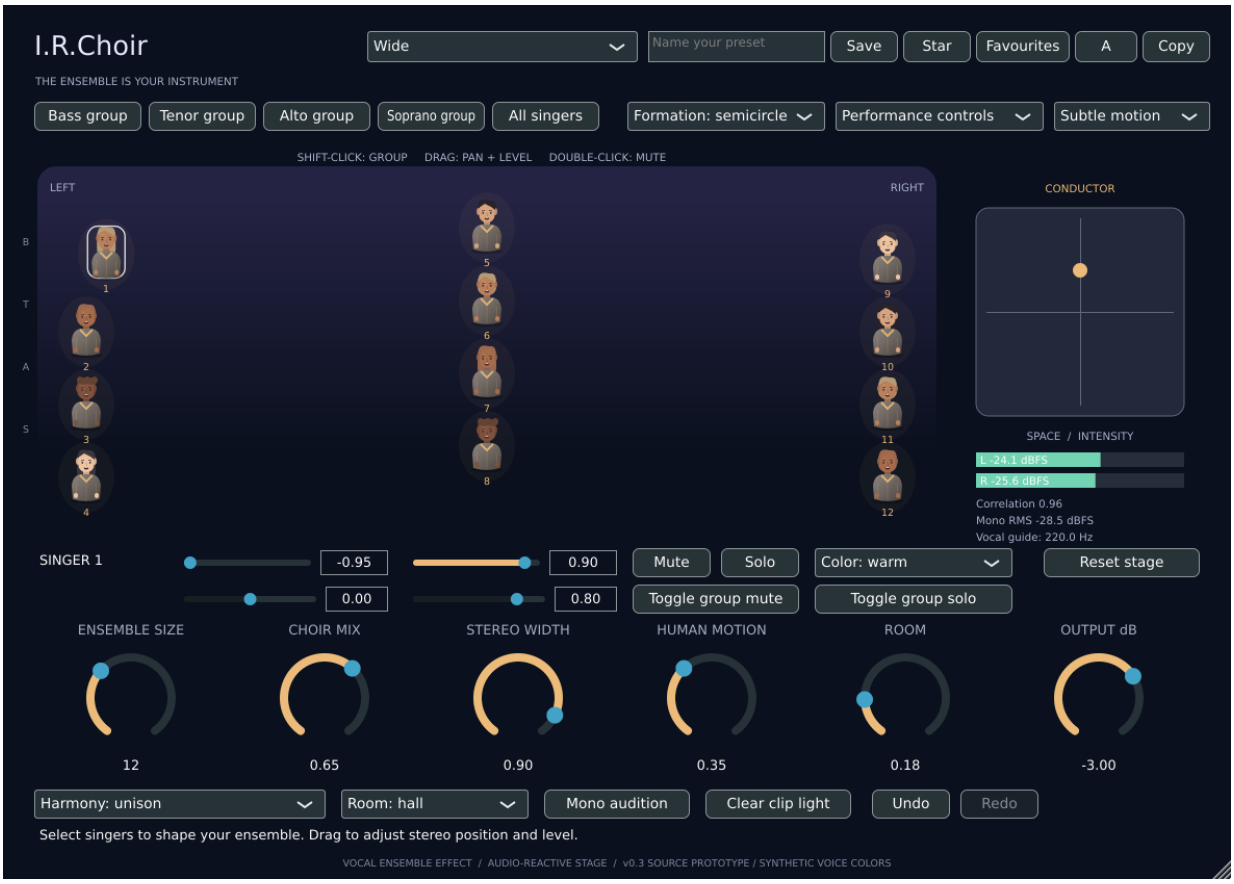

Feed a clean, single-voice vocal into the plugin. Choose Intimate or Wide. Begin in Unison mode. Adjust Choir Mix, Stereo Width and Room. Lower Output if the clip indicator lights.

For a singer solo, turn Choir Mix to 100% so the dry input is not heard alongside the soloed layer. MIDI keys alone do not generate a voice.

Sound engine: I.R.Choir layers and processes your input. It does not include distinct AI singers, choir recordings, a word builder or text-to-singing.

Meet your choir

An actual native editor capture, not a rendered concept.

Area	Start with this
Choir stage	Click a singer; drag left/right for pan or up/down for level. Shift-click to select several. Double-click to mute.
Section controls	Select a part or all singers. Use the group controls below the singer inspector.
Conductor	Move vertically for intensity and horizontally for space. Equivalent sliders are on the Humanize page.
Control page menu	Switch between performance, humanize, EQ/dynamics, delay and four-part controls.
Meters	Watch output peaks and clipping; use Mono audition to check stereo cancellation.
